Understanding Legacy systems, Stock and Financial Control

POSPORTAL software provides full inventory management & procurement as well as financial management in its own environment for use within small, medium & large retail enterprises. Even though POSPORTAL & PORTAL ASP are a total retail management system AMCCIT recognizes some businesses need to integrate to

an existing enterprise Stock & or Financial Control system. providing an interface for seamless integration into existing Stock & Financial

Control Systems using CSV files and user selectable downloads from the PORTAL. This includes emails to clients and suppliers for order processing & other functions.

Detailed, Real time and Accurate Information

POSPORTAL & PORTAL ASP system provides the user with detailed (all the way down to individual transaction detail), accurate and instant information (online). Reports are concise and complete, yielding management vital information on within day, daily and past information. New options, functions and reports continually being developed.

A comprehensive set of reports is available which include hourly sales, profit and cost, sales by department, customer analysis, account analysis, best and worst sellers, comparison reports, operator reports, supplier performance reports plus many more. These reports are available in

summary form with drill-down capability to get to the underlying detail all the way down to the individual

transaction including the site, terminal, operator, mode of tender, how long the transaction took to process and the items within it.

AMCCIT Products

POSPORTAL – the POS solution providing real time online sales, financial & stock updating of the host system with in-built redundancy & store and forward.

PORTAL ASP – a series of retail management modules encompassing financial reporting, financial control, procurement, inventory management, frequent shopper, gift vouchers, advertising & marketing, trial balance, debtors (online & POS), creditors, stock control. This package is hosted and accessible from any where using a standard browser without helper client software.

Simply choose the application server programs you wish to subscribe to. Add functionality when you need it. PORTAL ASP is a hosted subscription service in which the system administrative tasks (backup, etc) are performed without store involvement.

Development Services

AMCCIT are the developers of the POSPORTAL & PORTAL ASP software in Australia and offer services to customise reporting requirements or bespoke development. Allowing Customers to gain the most from

their POS investment and obtain the information needed when needed from their systems.

AMCCIT open architecture design facilitates your POS systems to link directly existing legacy systems using either XML or CSV files.
